Travertine Stone:

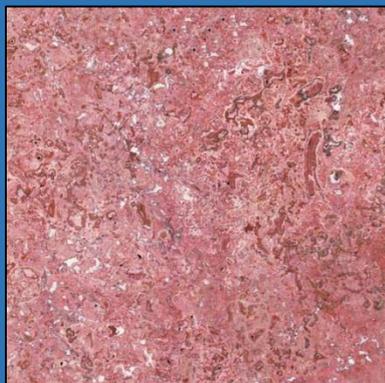

Travertine is a kind of porous limestone that is considered as a sedimentary and decorative stone. This stone remains from the deposits of hot springs. The cavities in this stone are due to the space occupied by the gases in the hot water of the source of sedimentation.

Travertine has a porous texture and a variety of stripes of different colors, due to the difference in the composition that exist during the sedimentation of the elements; they show themselves in various veins. Travertine has a thermal and acoustic insulation due to its porosity, and the cavity in travertine stone increases its resistance to fire. Travertine has an acceptable resistance. It can be cut into two types of corrugated and non-corrugated.

Because of its unique characteristics such as acceptable resistance, good cuttability and polishability, beautiful appearance, having porosities to be fully bonded and integrated with mortar, stable and resistant color against various weather conditions, travertine is used as one of the most popular building stones including modern and classical facade and landscaping.

Different Types of Travertine:

Different types of travertine are divided according to color, corrugated and non-corrugated. Such as red travertine, silver, chocolate, lime, walnut (and tree walnut), smoke, white, cream and....

Red Travertine

Tiny Corrugated Walnut
Travertine

Takab Travertine Cream

Corrugated White Travertine

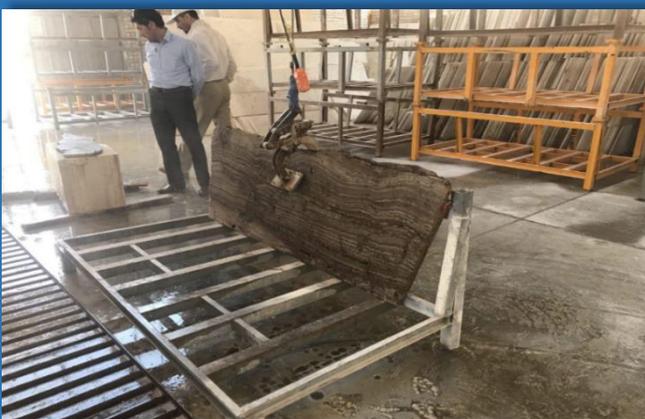

Takab Travertine Silver

Lime Travertine

Madankavan Hatam Zamin Company, using miscellaneous machinery, equipment and experienced personnel, works in the field of exploration, extraction and processing of minerals. Relying on the knowledge, expertise and experience of this complex in carrying out mine-related projects, it is hoped that the company in the light of the divine glory and in order to maintain and enhance the national resources and advance the development civil and mining projects will take effective steps.

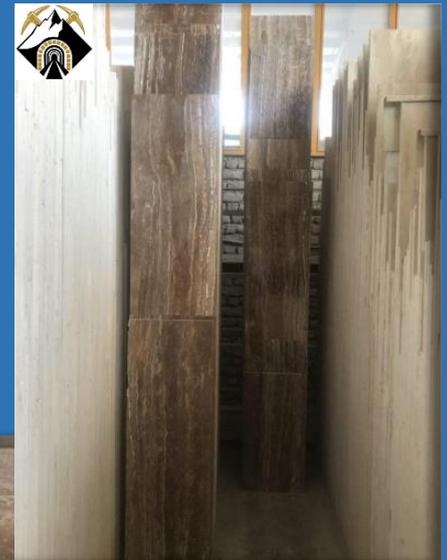

Travertine tree trunk (walnut and brown) with white waves is one of the special travertine among colored stones that is very effective in architectural design and the facade of buildings.

Some samples of travertine stone of the tree trunk type (walnut and brown) extracted by Madankavan Hatam Zamin Company
